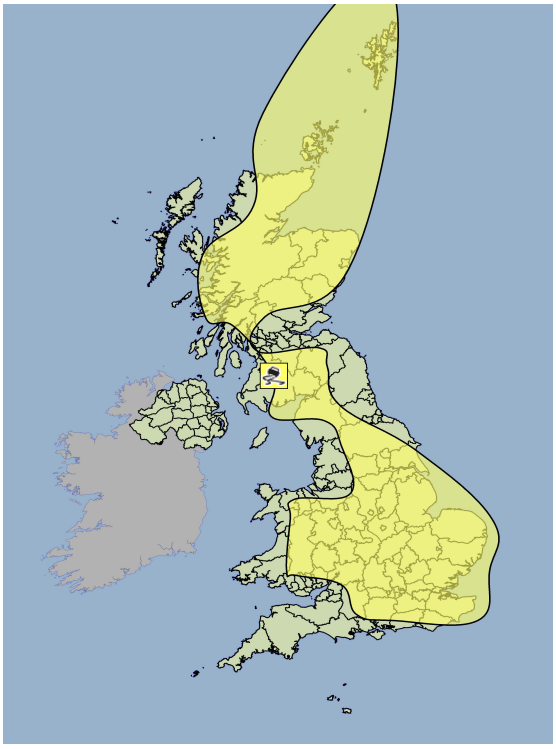
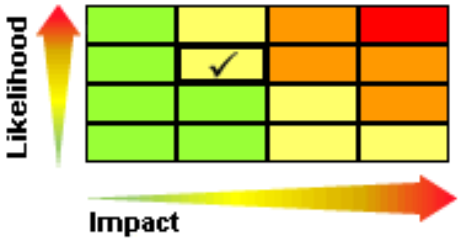
National Severe Weather Warning Service





Chief Forecasters Assessment
A colder, westerly, air stream will follow Sunday's frontal band bringing heavy wintry showers and wet surfaces to many areas during Sunday evening and night. Clear skies between showers are expected to allow temperatures to fall to or just below freezing at times resulting in a risk of icy stretches forming on untreated surfaces.

Some areas of the United Kingdom will also see a covering of snow. Snow amounts will generally be small, mostly accumulating on vegetation, however more persistent and heavy show is expected over the higher ground of western and central Highland and the southern Grampians. See separate warning for snow.

The Met Office have issued a **Yellow Warning** of **Ice**

Valid from **18:00 on Sun, 26th Jan 2014** until **10:00 on Mon, 27th Jan 2014**

Showers of rain, sleet and snow will continue overnight. Clear skies between showers are expected to allow temperatures to fall to around freezing resulting in a risk of icy stretches forming on untreated surfaces.

The public should be aware of the potential for some disruption to travel.

This is an update of the warning issued on Sunday, amended to exclude areas where temperatures have risen through the night.
